

StandICT.eu 2023
ICT STANDARDISATION OBSERVATORY AND SUPPORT FACILITY IN EUROPE

Forging international ICT standards

International collaboration, knowledge exchange and the social contract

Fiona Delaney

StandICT.eu has received funding from the European Union's Horizon 2020 Research and Innovation programme under Grant Agreement **No. 951972**.

Open standards contributions

Co-editor: ISO DTR3242 DLT use cases
Co-editor: ISO TR6277 DLT data flows

Contributor: ITU_T FG DLT 1.2 use cases
Art, Entertainment and eSports (2019)

Contributor: UNCEFACT/UNECE
Cross-border blockchain interoperability: legal,
technical and governance (2022)

Contributor: ISO DTR6039 Subject and object
identifiers for use in DLT design
Agri-food (2022)

Co-author: IEEE P2418.3 Framework for
Blockchain and Agriculture

Liaison: ISOTC307 Blockchain DLT/TC211 GIS

FIONA DELANEY

CEO @ Origin Chain Networks

Winner: National Innovation Award 2020 &
EU Innovation + Standards Award 2020

Chair @Blockchain Ireland#Startups

Co-Chair @ EUOS/Block

Advisor: Trust-Eat, Plastiks.io

MSc Software Eng, BSc Comp Sci.

Problem

Gaps in the origin story of food

Co-creation of digital food provenance

Provenance + farming practice

| | gCO2e/kg |
|-------|----------|
| Dairy | 4.5g |
| Beef | 20 g |

80% accumulates over lifetime on farm

Freshness + time to market

| gCO2e/kcal | | Retail |
|------------|---|-----------|
| 5 kcal | + | up to 12% |
| 14 kcal | + | up to 23% |

10% transport 10% storage

End of life waste mgt

| Consumer | Waste |
|----------|-------|
| 6% | 18% |
| 31% | 56% |

+18-56% loss due to waste

Carbon Footprint Analysis

GHG Protocol
Scope 3: corporate value chain accounting.

ORIGIN CHAIN NETWORKS AGRI-TRUST

Gaps in the origin story of food

Universal Farm Compliance App - on/off chain data flow analysis

汎用農業規制アプリ

Data-related operations of stakeholders: Farmers, landowners, agri-food compliance authorities (Dept. of Agriculture, Teagasc, Bord Bia and others eg Organic Trust), co-ops and food processors and technology service provider (OriginChain).

ISOTR3242:2022 DLT use cases
Universal Farm Compliance

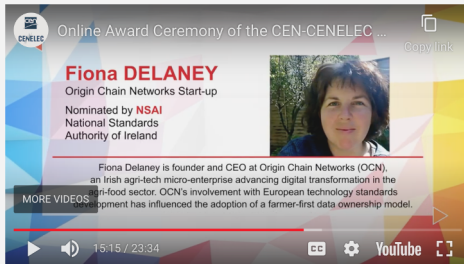

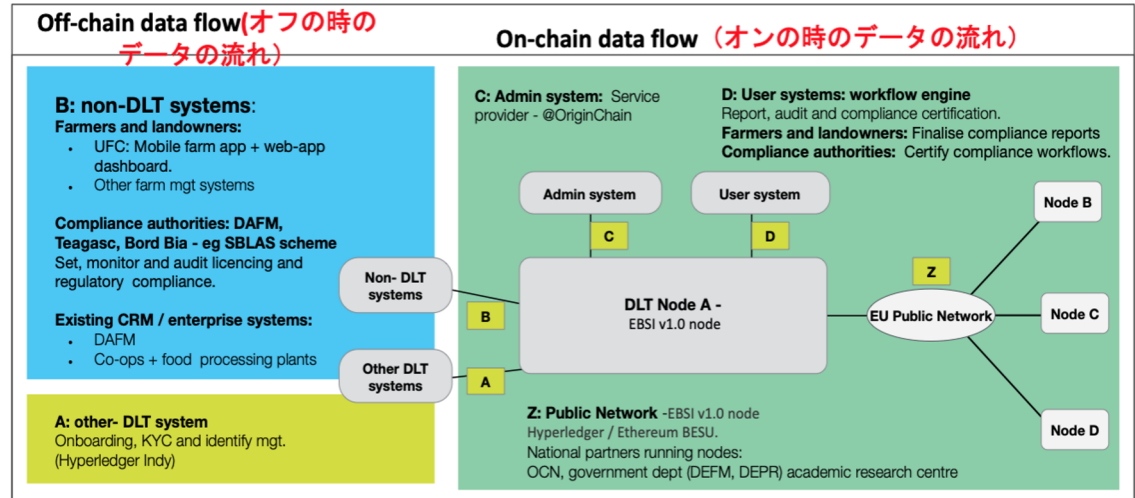

Award-winning open source solution to digital trade and interoperability challenges in the single digital marketplace.

Problem

Top 3 problems

Multi-party

Existing Alternatives

List how these problems are solved today.

In need of transformation

Solution

Top 3 features

Key Metrics

Key activities you measure

Unique Value Prop.

Single, clear and compelling message that states why you are different and worth buying

High-Level Concept

List your X for Y analogy (e.g. YouTube = Flickr for videos)

Unfair Advantage

Can't be easily copied or bought

Channels

Path to customers

Customer Segments

Target Customers

Consortia + governance

Early Adopters

List the characteristics of your ideal customers.

Market validation

Cost Structure

List your fixed and variable costs.
Customer acquisition costs
Distribution costs
Hosting
People
Etc.

Revenue Streams

List your sources of revenue.
Revenue Model
Life Time Value
Revenue
Gross Margin

Note: are your customers system users or system viewers?

Are your users co-creators of value in the system? eg. prosumers; data owner-providers?

Blockchain: a tool for innovation

ISO 5000 series: Innovation Management

Blockchain offers “increased value for partners cooperating in a decentral network, by providing data and process integrity, automation potential and enabling the transparent transfer of values and rights.”

Klein, S. (2018) A Use Case Identification Framework and Use Case Canvas for identifying and exploring relevant Blockchain opportunities. Proceedings 1st ERCIM Blockchain Workshop 2018 Reports of the European Society for Socially Embedded Technologies

Five agri-food contexts where DLTs are already implemented (Source: ISO DTR6039:2022)

| Context | Description |
|---|---|
| Corporate social responsibility schemes | Corporate brand values are enhanced by limiting impact and/or protecting endangered habitats - boglands, native woodlands, fresh watercourses e.g. JBS's (global beef producer) Green Platform initiative in the Amazon. |
| Traceability optimisation | Farm to fork transparency, swift product recall and enhanced consumer trust e.g. IBM Food Trust, Trace Alliance and GS1 /EVERYTHING pilot scheme |
| Food integrity assurance + fraud countermeasures | IGP, protected marine species and other high-value product category protection e.g. Consorzio Arancia Rossa, FishCoin, BeefLedger, TMail |
| Decentralised Finance (DeFi) | Peer to peer market place, transparent securitisation and crowd-funding. E.g. tokenising produce and on-farm assets in Argentina with Abakus Co., World Bank's sponsored Agri-Ledger Co. to deliver fair and timely payments to farmers in Haiti and Congo. |
| Industry/Agriculture 4.0/ Bioeconomy | Integrated approach to applying emerging technologies including Cloud (IoT, edge, fog and transparent computing) AI and DLT to accelerate, efficiency, sustainability and profitability. E.g. Breedr, Ripe.io, Origin Chain Networks |

ISO TR6277 Data flow model for DLT use cases

Transformation in the global digital economy

Urban geography defines **5 sectors of an economy**, a continuum of distance from the natural environment, beginning with primary economic activity and the utilization of raw materials. (Fischer, 1939; Quiggin, 2014; Schafran, 2018).

20th Century economics quantified input-output relationships between industry sectors and enumerated the concept of 'value add'. **In the 21st Century, the key is to account for the 'value of information'.**

Purpose and justification

- to develop a data flow model and framework for BDLT use cases with robust descriptive capabilities to enhance BDLT application design and interoperability.
- Clear understanding of data types and data flows in use cases allows for better designed systems; better governance and risk management provision and a sound basis from which to perform interoperability modelling where use cases may require interoperability between BDLTs in an orchestrated systems environment.

Pharmaledger ePI Project use case(ISO TC307/CENLEC JTC19 use case repository) Condova, G (2021)

The PharmaLedger introduces ePI or Electronic Product Information leaflets into the healthcare value chain. The use case describes OpenDSU (Open Data Sharing Units) a standard that defines how to store data and code outside the Blockchain (off-chain) in order to meet data self-sovereignty requirements. Data and code build a container which is cryptographically secured and anchored in the Blockchain, we call that a Data Sharing Unit (DSU). With this approach, we combine the benefits of Blockchain such as integrity, traceability, and non-repudiation while preserving confidentiality and data privacy for the data owners. OpenDSU is designed with privacy and security in mind. As OpenDSU is Blockchain technology agnostic, it supports any kind of programmable Blockchain technology.

Open-data earth observation resources in habitat classification in the production of sustainable food. Delaney, F. Solomon, M. (2021).

This paper discusses the precarity of utilizing Open-Source Resources (OR) in remote habitat classification on the part of non-public sector actors. Earth Observation (EO) is an emerging tool in the digital transformation process and technology start-ups, social change policymakers and food traceability stakeholders are keen to access this potential. The importance of the food value chain traverses all economic sectors (Fisher, 1939; Quiggin, 2013; Schafran, 2018;) and the imperative to forge trusted value chain transparency, interoperable data availability, and data governance strategies are required (Criado and Gil- Garcia, 2019).
